Dental science, after diligent research; has found ways to fight film on teeth. Careful tests have proved them beyond question. Now leading dentists everywhere advise their daily use.

The methods are embodied in a scientific tooth paste-Pepsodent. So all may regularly apply them. To countless homes they have brought already a new era in teeth

How film ruins

Film is that viscous coat you feel. It clings to teeth, enters crevices and stays. The ordinary dentifrice does not effectively combat it. So, despite the tooth brush, it has caused tremendous damage.

Film absorbs stains, making the teeth look dingy. It forms the basis of tartar. It holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

It breeds millions of germs and they, with tartar, are the chief eanse of pyorrhea.

product also multiplies the starch digestant in the saliva, to digest starch deposits that cling. It multiplies the alkalimity of the saliva, to neutralize the acids which came decay.

In these ways it acts as fruit acids do. With every use it multiplies Nature's teeth-protecting forces. Old methods had the opposite effect.
